# To Use Google's Language Translation Feature

1. Go to www.google.com
2. Click on the "more" tab.

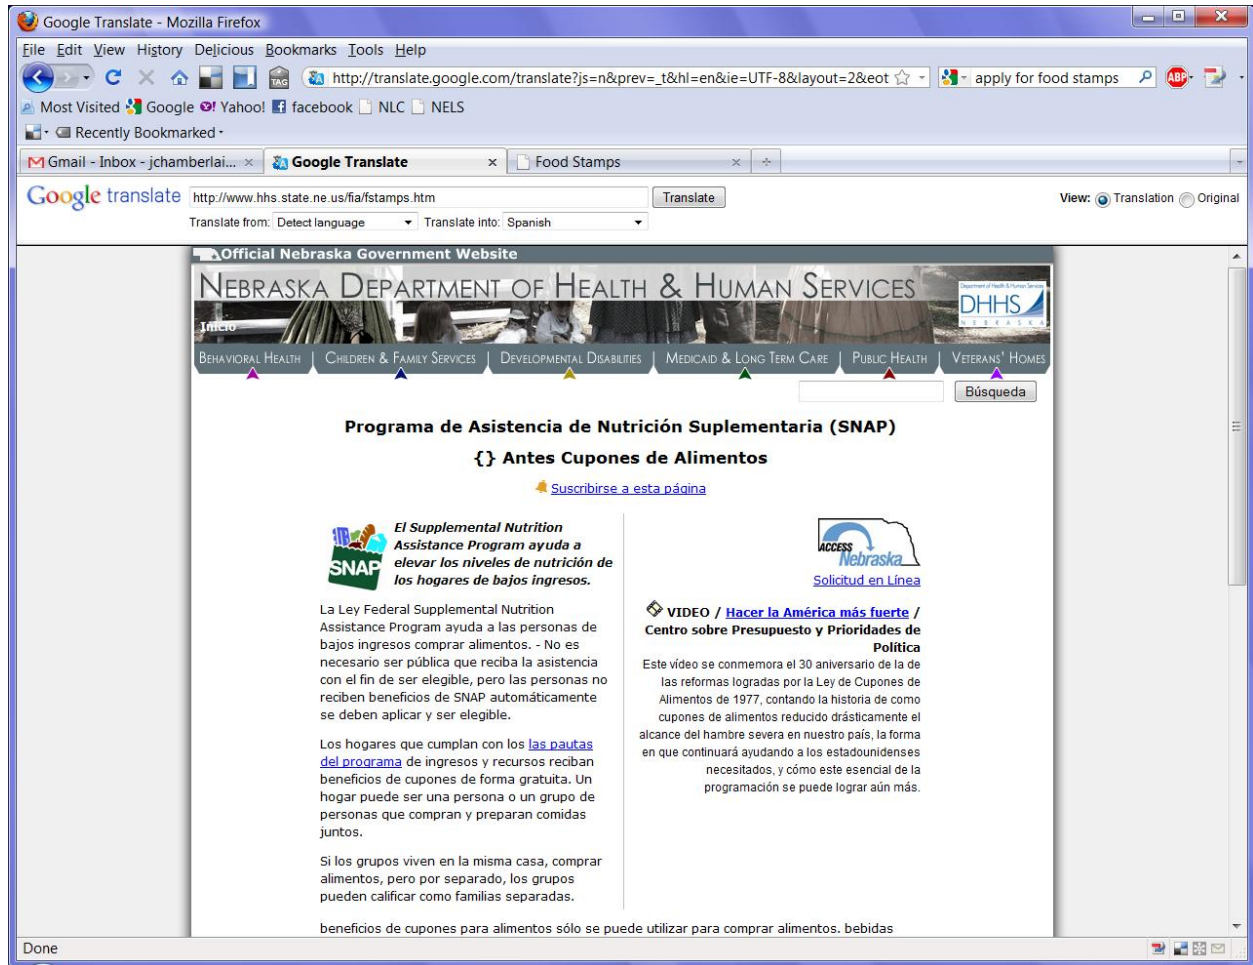

3. Click on "Translate."

4. Type a web address into the box.

5. Use the drop down menu to select the language that you want the website translated into and then click the "Translate" button.

6. Once you've hit "Translate" it will take you that web address in its translated version.

You can use this same process to translate words, phrases or passages by entering that text into the translation box instead of entering a web address.
